

Easy-to-use workplace control scheme for hazardous materials (EMKG) now available in HSE software

Berlin, February 24, 2014 – The HSE software, EcoWebDesk, has been released in version 6.3 with significant innovations for the “Easy-to-use workplace control scheme for hazardous materials” (Einfaches Maßnahmenkonzept Gefahrstoffe, EMKG). As of now risk assessments in the management of hazardous materials are tailored around the EMKG version 2.2 of the Federal Institute for Occupational Safety and Health (BAuA). The decision tables, as defined in the EMKG, are factored in for the most frequent risk assessment activities, so that all necessary safeguards for any existing dangers can be quickly compiled at the touch of a button. It must be noted, however, that the BAuA is a German government agency and thus its regulations apply only to business that is conducted within Germany.

In addition the data record history for Measures, Audits and HazMats was optimized, and now provides a structured overview of all changes of the data sets in one tab. To the numerous German video tutorials a number of English language versions were added in version 6.3. Overall EcoWebDesk online-software, with its many new functions, equips health, safety and environmental managers and hazardous substances officers with a hands-on tool.

EcoWebDesk® is a combined and flexible management system for workplace safety and environmental management. Company-owned data and goals can be aligned with operational necessities and indicators, industrial environmental protection duties and legal norms as well as workplace safety requirements and risk avoidance. EcoWebDesk is strictly compliant with DIN EN ISO 14001, 50001 and OHSAS 18001, officially confirmed by DEKRA Certification GmbH. EcoIntense GmbH is certified according to DIN EN ISO 9001. In addition to the Berlin headquarters there are distribution branches in Lower Saxony and Bavaria as well as Houston, Texas (USA).
